SCHEMATIC CIRCUIT DIAGRAM ....................................................................
SAFETY PRECAUTIONS

IMPORTANT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These parts are identified by △ in the Schematic Diagram and Exploded View. It is essential that these special safety parts should be replaced with the same components as recommended in this manual to prevent Shock, Fire, or other Hazards. Do not modify the original design without permission of manufacturer.

General Guidance

An isolation Transformer should always be used during the servicing of a receiver whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks.

It will also protect the receiver and it's components from being damaged by accidental shorts of the circuitry that may be inadvertently introduced during the service operation.

If any fuse(or Fusible Resistor) in this TV receiver is blown, replace it with the specified.

When replacing a high wattage resistor (Oxide Metal Film Resistor, over 1 W), keep the resistor 10mm away from PCB.

Keep wires away from high voltage or high temperature parts.

Before returning the receiver to the customer,

always perform an AC leakage current check on the exposed metallic parts of the cabinet, such as antennas, terminals, etc., to be sure the set is safe to operate without damage of electrical shock.

Leakage Current Cold Check(Antenna Cold Check)

With the instrument AC plug removed from AC source, connect an electrical jumper across the two AC plug prongs. Place the AC switch in the on position, connect one lead of ohm-meter to the AC plug prongs tied together and touch other ohm-meter lead in turn to each exposed metallic parts such as antenna terminals, phone jacks, etc.

If the exposed metallic part has a return path to the chassis, the measured resistance should be between 1 Ω and 5.2 Ω. When the exposed metal has no return path to the chassis the reading must be infinite.

An other abnormality exists that must be corrected before the receiver is returned to the customer.

Leakage Current Hot Check

(See below Figure)

Plug the AC cord directly into the AC outlet.

Do not use a line Isolation Transformer during this check. Connect 1.5 K / 10 watt resistor in parallel with a 0.15 uF capacitor between a known good earth ground (Water Pipe, Conduit, etc.) and the exposed metallic parts. Measure the AC voltage across the resistor using AC voltmeter with 1000 ohms/volt or more sensitivity. Reverse plug the AC cord into the AC outlet and repeat AC voltage measurements for each exposed metallic part. Any voltage measured must not exceed 0.75 volt RMS which is corresponds to 0.5 mA.

In case any measurement is out of the limits specified, there is possibility of shock hazard and the set must be checked and repaired before it is returned to the customer.

Leakage Current Hot Check circuit

When 25A is impressed between Earth and 2nd Ground for 1 second, Resistance must be less than 0.1 Ω

*Base on Adjustment standard
CAUTION: Before servicing receivers covered by this service manual and its supplements and addenda, read and follow the SAFETY PRECAUTIONS on page 3 of this publication.

NOTE: If unforeseen circumstances create conflict between the following servicing precautions and any of the safety precautions on page 3 of this publication, always follow the safety precautions. Remember: Safety First.

General Servicing Precautions
1. Always unplug the receiver AC power cord from the AC power source before;
   a. Removing or reinstalling any component, circuit board module or any other receiver assembly.
   b. Disconnecting or reconnecting any receiver electrical plug or other electrical connection.
   c. Connecting a test substitute in parallel with an electrolytic capacitor in the receiver.

   CAUTION: A wrong part substitution or incorrect polarity installation of electrolytic capacitors may result in an explosion hazard.

2. Test high voltage only by measuring it with an appropriate high voltage meter or other voltage measuring device (DVM, FETVOM, etc) equipped with a suitable high voltage probe. Do not test high voltage by "drawing an arc".

3. Do not spray chemicals on or near this receiver or any of its electrical assemblies.

4. Unless specified otherwise in this service manual, clean electrical contacts only by applying the following mixture to the contacts with a pipe cleaner, cotton-tipped stick or comparable non-abrasive applicator; 10 % (by volume) Acetone and 90 % (by volume) isopropyl alcohol (90 % - 99 % strength)

   CAUTION: This is a flammable mixture.

   Unless specified otherwise in this service manual, lubrication of contacts is not required.

5. Do not defeat any plug/socket B+ voltage interlocks with which receivers covered by this service manual might be equipped.

6. Do not apply AC power to this instrument and/or any of its electrical assemblies unless all solid-state device heat sinks are correctly installed.

7. Always connect the test receiver ground lead to the receiver chassis ground before connecting the test receiver positive lead. Always remove the test receiver ground lead last.

   USE WITH THIS RECEIVER ONLY THE TEST FixTURES SPECIFIED IN THIS SERVICE MANUAL.

   CAUTION: Do not connect the test fixture ground strap to any heat sink in this receiver.

Electrostatically Sensitive (ES) Devices
Some semiconductor (solid-state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed to prevent potential shock reasons prior to applying power to the unit under test.

2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.

3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.

4. Use only an anti-static type solder removal device. Some solder removal devices not classified as “anti-static” can generate electrical charges sufficient to damage ES devices.

5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.

6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).

7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

   CAUTION: Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device.)

General Soldering Guidelines
1. Use a grounded-tip, low-wattage soldering iron and appropriate tip size and shape that will maintain tip temperature within the range of 500 °F to 600 °F.

2. Use an appropriate gauge of RMA resin-core solder composed of 60 parts tin/40 parts lead.

3. Keep the soldering iron tip clean and well tinned.

4. Thoroughly clean the surfaces to be soldered. Use a mall wire-bristle (0.5 inch, or 1.25 cm) brush with a metal handle. Do not use freon-propelled spray-on cleaners.

5. Use the following unsoldering technique
   a. Allow the soldering iron tip to reach normal temperature.
   b. Heat the component lead until the solder melts.
   c. Quickly draw the melted solder with an anti-static, suction-type solder removal device or with solder braid.
   d. Close the soldering iron tip shorted together by conductive foam, aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.

6. Use the following soldering technique.
   a. Allow the soldering iron tip to reach a normal temperature.
   b. First, hold the soldering iron tip and solder the strand against the component lead until the solder melts.
   c. Quickly move the soldering iron tip to the junction of the component lead and the printed circuit foil, and hold it there only until the solder flows onto and around both the component lead and the foil.

   CAUTION: Work quickly to avoid overheating the circuit board printed foil.

7. Use the following unsoldering technique
   a. Close the soldering iron tip shorted together by conductive foam, aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
   b. First, hold the soldering iron tip and solder the strand against the component lead until the solder melts.

   CAUTION: Work quickly to avoid overheating the circuit board printed foil.
IC Remove/Replacement
Some chassis circuit boards have slotted holes (oblong) through which the IC leads are inserted and then bent flat against the circuit foil. When holes are the slotted type, the following technique should be used to remove and replace the IC. When working with boards using the familiar round hole, use the standard technique as outlined in paragraphs 5 and 6 above.

Removal
1. Desolder and straighten each IC lead in one operation by gently prying up on the lead with the soldering iron tip as the solder melts.
2. Draw away the melted solder with an anti-static suction-type solder removal device (or with solder braid) before removing the IC.

Replacement
1. Carefully insert the replacement IC in the circuit board.
2. Carefully bend each IC lead against the circuit foil pad and solder it.
3. Clean the soldered areas with a small wire-bristle brush.
   (It is not necessary to reapply acrylic coating to the areas).

"Small-Signal" Discrete Transistor
Removal/Replacement
1. Remove the defective transistor by clipping its leads as close as possible to the component body.
2. Bend into a "U" shape the end of each of three leads remaining on the circuit board.
3. Bend into a "U" shape the replacement transistor leads.
4. Connect the replacement transistor leads to the corresponding leads extending from the circuit board and crimp the "U" with long nose pliers to insure metal to metal contact then solder each connection.

Power Output, Transistor Device
Removal/Replacement
1. Heat and remove all solder from around the transistor leads.
2. Remove the heat sink mounting screw (if so equipped).
3. Carefully remove the transistor from the heat sink of the circuit board.
4. Insert new transistor in the circuit board.
5. Solder each transistor lead, and clip off excess lead.
6. Replace heat sink.

Diode Removal/Replacement
1. Remove defective diode by clipping its leads as close as possible to diode body.
2. Bend the two remaining leads perpendicular y to the circuit board.
3. Observing diode polarity, wrap each lead of the new diode around the corresponding lead on the circuit board.
4. Securely crimp each connection and solder it.
5. Inspect (on the circuit board copper side) the solder joints of the two "original" leads. If they are not shiny, reheat them and if necessary, apply additional solder.

Fuse and Conventional Resistor
Removal/Replacement
1. Clip each fuse or resistor lead at top of the circuit board hollow stake.
2. Securely crimp the leads of replacement component around notch at stake top.
3. Solder the connections.
   CAUTION: Maintain original spacing between the replaced component and adjacent components and the circuit board to prevent excessive component temperatures.

Circuit Board Foil Repair
Excessive heat applied to the copper foil of any printed circuit board will weaken the adhesive that bonds the foil to the circuit board causing the foil to separate from or "lift-off" the board. The following guidelines and procedures should be followed whenever this condition is encountered.

At IC Connections
To repair a defective copper pattern at IC connections use the following procedure to install a jumper wire on the copper pattern side of the circuit board. (Use this technique only on IC connections).
1. Carefully remove the damaged copper pattern with a sharp knife. (Remove only as much copper as absolutely necessary).
2. carefully scratch away the solder resist and acrylic coating (if used) from the end of the remaining copper pattern.
3. Bend a small "U" in one end of a small gauge jumper wire and carefully crimp it around the IC pin. Solder the IC connection.
4. Route the jumper wire along the path of the out-away copper pattern and let it overlap the previously scraped end of the good copper pattern. Solder the overlapped area and clip off any excess jumper wire.

At Other Connections
Use the following technique to repair the defective copper pattern at connections other than IC Pins. This technique involves the installation of a jumper wire on the component side of the circuit board.
1. Remove the defective copper pattern with a sharp knife.
   Remove at least 1/4 inch of copper, to ensure that a hazardous condition will not exist if the jumper wire opens.
2. Trace along the copper pattern from both sides of the pattern break and locate the nearest component that is directly connected to the affected copper pattern.
3. Connect insulated 20-gauge jumper wire from the lead of the nearest component on one side of the pattern break to the lead of the nearest component on the other side.
   Carefully crimp and solder the connections.
   CAUTION: Be sure the insulated jumper wire is dressed so the it does not touch components or sharp edges.
NOTE: Specifications and others are subject to change without notice for improvement.

1. Application range

This specification is applied to the LCD TV used LD01M chassis.

2. Requirement for Test

Each part is tested as below without special appointment.

1) Temperature: 25 °C ± 5 °C (77 °F ± 9 °F), CST: 40 °C ± 5 °C
2) Relative Humidity: 65 % ± 10 %
3) Power Voltage:
   - Standard input voltage (100 V - 240 V, 50 / 60Hz)
   - Standard Voltage of each products is marked by models.
4) Specification and performance of each parts are followed each drawing and specification by part number in accordance with BOM.
5) The receiver must be operated for about 5 minutes prior to the adjustment.

3. Test method

1) Performance: LGE TV test method followed
2) Demanded other specification
   - Safety: CE, IEC specification
   - EMC: CE, IEC

ADJUSTMENT INSTRUCTION

1. Application Range
This specification sheet is applied to all of the LCD TV with LD01M chassis.

2. Designation
1) The adjustment is according to the order which is designated and which must be followed, according to the plan which can be changed only on agreeing.
2) Power Adjustment: Free Voltage
3) Magnetic Field Condition: Nil.
4) Input signal Unit: Product Specification Standard
5) Reserve after operation: Above 5 Minutes (Heat Run)
   Temperature : at 25 ºC ± 5 ºC
   Relative humidity : 65 % ± 10 %
   Input voltage : 220 V, 60 Hz
6) Adjustment equipments: Color Analyzer (CA-210 or CA-110), Pattern Generator(MSPG-925L or Equivalent), DDC Adjustment Jig equipment, Service remote control.
7) Push the “IN STOP” key - For memory initialization.

3. Main PCB check process
   * APC - After Manual-Insert, executing APC
   * USB DOWNLOAD(*.epk file download)
     1) Put the USB Stick to the USB socket.
     2) Automatically detecting update file in USB Stick
        - If version of update file in USB Stick is Lower, it didn’t work. But version of update file is Higher, USB data is automatically detecting.
     3) Show the message “Copying files from memory”
     4) Click “Connect” tab. If “Can’t” is displayed, check connection between computer, jig, and set.
     5) Click “Auto” tab and set as below.
     6) Click “Run”. After downloading, check “OK” message.
     7) After downloading, check “OK” message.

Case1 : Software version up
1. After downloading S/W by USB, TV set will reboot automatically.
2. Push “In-stop” key.
3. Push “Power on” key.
4. Function inspection
5. After function inspection, Push “In-stop” key.

Case2 : Function check at the assembly line
1. When TV set is entering on the assembly line, Push “In-stop” key at first.
2. Push “Power on” key for turning it on.
   -> If you push “Power on” key, TV set will recover channel information by itself.
3. After function inspection, Push “In-stop” key.

* Please Check the Speed To use speed between from 200KHz to 400KHz
* After downloading, have to adjust Tool Option again.
  (1) Push "IN-START" key in service manual control.
  (2) Select "Tool Option 1" and push "OK" key.
  (3) Punch in the number. (Each models has their number.)
  (4) Correction Tool option is completed.

3.1. ADC Process
- Enter ‘EZ ADJUST’ mode by pushing ‘ADJ’ key,
- Enter Internal ADC mode by pushing ‘G’ key at “7. ADC Calibration”.

<Caution> Using ‘P-ONLY’ key of the Adjustment remote control, power on TV.

* ADC Calibration Protocol (RS232)

- ad 00 10 [Adjud 480 Comp1]
- xb 00 60 [RGB Input (1024*768)]
- ad 00 10 [Adjust 1024*768 RGB]
- aa 00 90 End Adjust mode
* Required equipment : Adjustment Remote control

3.2. EDID Download
1) After Enter Service Mode by pushing ‘ADJ’ key,
2) Enter EDID D/L mode.
3) Enter ‘START’ by pushing ‘OK’ key.

<Caution> Never connect HDMI & D-sub cable when EDID download

3.3. EDID data

3.4. Function Check
(1) Check display and sound
  - Check Input and Signal items. (cf. work instructions)
  1) TV
  2) AV
  3) COMPONENT1/2 (480i)
  4) RGB (PC : 1024 x 768 @ 60hz)
  5) HDMI
  6) PC Audio In
* Display and Sound check is executed by remote control.

<Caution> Not to push the INSTOP key after completion if the function inspection.

4. Total Assembly line process
4.1. Adjustment Preparation
  - W/B Equipment condition
    CA210
    - CCFL/EEFL -> CH 9, Test signal : Inner pattern(80 IRE)
    - LED -> CH 14, Test signal : Inner pattern(80 IRE)
  - Above 5 minutes H/run in the inner pattern. (“power on” key of adjustment remote control)
  - Edge LED W/B Table in process of aging time(Only LGD Module)
    CA210 : CH14, Test signal : Inner pattern (80 IRE)

* Connecting picture of the measuring instrument
(On Automatic control)
Inside PATTERN is used when W/B is controlled. Connect to auto controller or push Adjustment R/C POWER ON -> Enter the mode of White-Balance, the pattern will come out

* Auto-control interface and directions
  1) Adjust in the place where the influx of light like floodlight around is blocked. (illumination is less than 10 lux).
  2) Adhere closely the Color Analyzer (CA210) to the module less than 10cm distance, keep it with the surface of the Module and Color Analyzer’s Prove vertically.(80° – 100°).
  3) Aging time
    - After aging start, keep the power on (no suspension of power supply) and heat-run over 15minutes.
    - Using ‘no signal’ or ‘full white pattern’ or the others, check the back light on.

* Connecting picture of the measuring instrument
(On Automatic control)
Inside PATTERN is used when W/B is controlled. Connect to auto controller or push Adjustment R/C POWER ON -> Enter the mode of White-Balance, the pattern will come out

  - After enter Service Mode by pushing “ADJ” key,
  - Enter White Balance by pushing “W” key at “8. White Balance”.

* Connecting picture of the measuring instrument
(On Automatic control)
Inside PATTERN is used when W/B is controlled. Connect to auto controller or push Adjustment R/C POWER ON -> Enter the mode of White-Balance, the pattern will come out

* After done all adjustments, Press “In-start” key and compare Tool option and Area option value with its BOM, if it is correctly same then unplug the AC cable. If it is not same, then correct it same with BOM and unplug AC cable. For correct it to the model’s module from factory Jig model.
  - Push the “IN STOP” key after completing the function inspection. And Mechanical Power Switch must be set “ON”.

* Auto adjustment Map(RS-232C)
RS-232C COMMAND
[CMD ID DATA]
Wb 00 00 White Balance Start
Wb 00 ff White Balance End

</table>

** Caution **
Color Temperature : COOL, Medium, Warm. One of R Gain/G Gain/ B Gain should be kept on 0xC0, and adjust other two lower than C0. (when R/G/B Gain are all C0, it is the FULL Dynamic Range of Module)
4.2. EYE-Q function check
Step 1) Turn on the TV set.
Step 2) Press “EYE” key on Adjustment remote control.
Step 3) Cover the Eye Q sensor at the front of set for 6 seconds.
Step 4) Check the value of Sensor Data. It must be below 10.
If not so, the Eye Q sensor may have some defect. Change the Eye Q sensor.
Step 5) Wait for 6 seconds after withdrawing form the Eye Q sensor.
Step 6) Check the value of Backlight. It must rise.
If not so, the Eye Q sensor may have some defect. Change the Eye Q sensor.

* EYE-Q Test is except for LV23xx/LK33x/LK43x series.

4.3. Outgoing condition Configuration
- When pressing IN-STOP key by Service remote control, Red LED are blinked alternatively. And then automatically turn off. (Must not AC power OFF during blinking)

5. GND and HI-POT Test
5.1. GND & HI-POT auto-check preparation
Check the Power cable and Signal cable insertion condition

5.2. GND & HI-POT auto-check
(1) Pallet moves in the station. (Power cord / AV cord is tightly inserted)
(2) Connect the AV JACK Tester.
(3) Controller (GWS103-4) on.
(4) GND Test (Auto)
  - If Test is failed, Buzzer operates.
  - If Test is passed, execute next process (Hi-pot test).
  (Remove A/V CORD from A/V JACK BOX.)
(5) HI-POT test (Auto)
  - If Test is failed, Buzzer operates.
  - If Test is passed, GOOD Lamp on and move to next process automatically.

5.3. Checkpoint
(1) Test voltage
  - GND: 1.5 KV / min at 100 mA
  - SIGNAL: 3 KV / min at 100 mA
(2) TEST time: 1 second
(3) TEST POINT
  - GND Test = Power cord GND and Signal cord GND.
  - Hi-pot Test = Power cord GND and LIVE & NEUTRAL.
(4) LEAKAGE CURRENT: At 0.5 mArms

6. Model name & Serial number D/L
- Press “Power on” key of service remote control.
  (Baud rate : 115200 bps)
- Connect RS232 Signal Cable to RS-232 Jack.
- Write Serial number by use RS-232.
- Must check the serial number at the Diagnostics of SET UP menu(Refer to below.)

6.1. Signal TABLE

<table>
<thead>
<tr>
<th>CMD</th>
<th>LENGTH</th>
<th>ADH</th>
<th>ADL</th>
<th>DATA_1 ... Data_n</th>
<th>CS</th>
<th>DELAY</th>
</tr>
</thead>
<tbody>

<td>84h+n</td>
<td>n-bytes Write(n=1~16)</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

6.2. Command Set

* Description
  FOS Default write : <7mode data> write
  Vtotal, V_Frequency, Sync_Polarity, Htotal, Hstart, Vstart, 0, Phase
  Data write: Model name and Serial number write in EEPROM.

6.3. Method & notice
A. Serial number D/L is using of scan equipment.
B. Setting of scan equipment operated by Manufacturing Technology Group.
C. Serial number D/L must be conformed when it is produced in production line, because serial number D/L is mandatory by D-book 4.0.

6.1. Signal TABLE

<table>
<thead>
<tr>

"Manual Download (Model Name and Serial Number)
If the TV set is downloaded by OTA or Service man, sometimes model name or serial number is initialized. (Not always)
There is impossible to download by bar code scan, so It need Manual download.
1) Press the ‘Instart’ key of Adjustment remote control.
2) Go to the menu ‘6.Model Number D/L’ like below photo.
3) Input the Factory model name(ex 32LV3400-ZG) or Serial number like photo.
4) Check the model name Instart menu. -> Factory name displayed. (ex 32LV3400-ZG)
5) Check the Diagnostics. (DTV country only) -> Buyer model displayed. (ex 32LV3400)

7. CI+ Key Download method
(1) Download Procedure
1) Press “Power on” key of a service remote control.
   (Baud rate : 115200 bps)
2) Connect RS232-C Signal Cable.
3) Write CI+ Key through RS-232-C.
4) Check whether the key was downloaded or not at ‘In Start’ menu. (Refer to below.)

   => Check the Download to CI+ Key value in LGset.
   (1) Check the method of CI+ Key value.
      a. Check the method on Instart menu.
      1) Into the main assembly mode (RS232 : aa 00 00)
         CMD 1  CMD 2  Data 0
         A    A     0   0

      2) Check the key download for transmitted command.
         (RS232 : ci 00 10)
         CMD 1  CMD 2  Data 0
         C    I     1   0

      3) Result value
         - normally status for download : OKx
         - abnormally status for download : NGx

   (2) Check the method of CI+ Key value.(RS232)
      1) Into the main ass’y mode (RS232 : aa 00 00)
         CMD 1  CMD 2  Data 0
         A    A     0   0

      2) Check the method of CI+ key by command
         (RS232 : ci 00 20)
         CMD 1  CMD 2  Data 0
         C    I     2   0

      3) Result value
         i 01 OK 1d1852d21c1ed5dcx  Cl+ key Value
1. Power-up boot check

- Check stand-by Voltage. P403 9~12pin : +3.5V_ST
  - No: Check Power connector. 
  - OK: Main B/D 3.5V Line Short Check
  - OK: Replace Power board.

- Check Micom Voltage. L404 : +3.5V
  - No: Replace L404.

- Check X201 clock. 24 MHz
  - No: Replace X201.

- Check P403 PWR_ON. 1pin : 3.3V
  - No: Re-download software.
  - No: Replace Mstar(IC101) or Main board.

- Check Multi Voltage. P403 2pin:24V, 17pin:12V
  - No: Replace Power Board.

- Check IC402/3/7 Output Voltage.
  - IC402 : 2.5V
  - IC403 : 1.1V
  - IC407 : 1.5V
  - Q403 : 3.3V
  - No: Replace IC402/3/7, Q403.

- Check LVDS Power Voltage. Q409 : 12V
  - No: Replace Q409.

- Check Mstar LVDS Output
  - No: Replace Mstar(IC101) or Main board.

- Check Inverter Control & Error Out.
  - P403 18 pin : High
  - P403 24 pin : low
  - No: Check Power Board or Module.

- Change Module.
2. Digital TV Video

Check RF Cable & Signal

- **ok**
  - Check Tuner 3.3V Power L3703
    - **No**
      - Replace L3703.
    - **ok**
      - Check Tuner 1.8V Power IC3703 2 pin : 1.8V
        - **No**
          - Replace IC3703.
        - **ok**
          - Check IF_P/N Signal TU3700 10/11 Pin
            - **No**
              - Bad Tuner. Replace Tuner.
            - **ok**
              - Check Mstar LVDS Output.
                - **No**
                  - Replace Mstar(IC101) or Main Board.

3. Analog TV Video

Check RF Cable & Signal.

- **ok**
  - Check Tuner 3.3V Power L3703
    - **No**
      - Replace L3703.
    - **ok**
      - Check Tuner 1.8V Power IC3703 2 pin : 1.8V
        - **No**
          - Replace IC3703.
        - **ok**
          - Check CVBS Signal TU3700 8 Pin
            - **No**
              - Bad Tuner. Replace Tuner.
            - **ok**
              - Check Mstar LVDS Output.
                - **No**
                  - Replace Mstar(IC101) or Main Board.
4. AV Video

Check input signal format. Is it supported?
ok

Check AV Cable for damage for damage or open conductor.
ok

Check JK1604 CVBS Signal Line R246.
No ➔ Replace Jack.
ok

Check CVBS_DET Signal.
No ➔ Replace R1666.
ok

Check Mstar LVDS Output.
No ➔ Replace Mstar(IC101) or Main Board.

5. Component Video

Check input signal format. Is it supported?
ok

Check Component Cable for damage or open conductor.
ok

Check JK1601 or 1603 Y/PB/PR signal Line.
No ➔ Replace Jack.
ok

Check COMP_DET Signal.
No ➔ Replace R1615.
ok

Check Mstar LVDS Output.
No ➔ Replace Mstar(IC101) or Main Board.
6. SCART Video

Check input signal format.
Is it supported?

ok

Check Component Cable for damage or open conductor.

ok

Check JK1602 R/G/B and sync signal Line.

No
Replace Jack.

ok

Check SC1_DET Signal.

No
Replace R1614.

ok

Check Mstar LVDS Output.

No
Replace Mstar(IC101) or Main Board

7. RGB Video

Check input signal format.
Is it supported?

ok

Check RGB Cable conductors for damage or open conductor.

ok

Check EDID I2C Signal R138, R139(SDA,SCL).

No
Re-download EDID data, Replace Mstar(IC101) or Main Board.

ok

Check JK1104 H/V_Sync/R/G/B Signal Line.

No
Replace Jack.

ok

Check DSUB_DET.

No
Replace R1146 or R1147.

ok

Check Mstar LVDS Output.

No
Replace Mstar(IC101) or Main Board.
8. HDMI Video

- Check input signal format. Is it supported?
  - OK
  - No
    - Replace the defective IC or re-download EDID data.

- Check HDMI Cable conductors for damage or open conductor.
  - OK
  - No
    - Replace JK801, JK802, JK803.

- Check EDID R4033, R4034, R4035, R4036, R4037, R4038 I2C Signal.
  - OK
  - No
    - Replace JK801, JK802, JK803.

- Check EDID R4033, R4034, R4035, R4036, R4037, R4038 I2C Signal.
  - OK
  - No
    - Replace R830, R828, R862.

- Check HDMI_DET(HPD).
  - OK
  - No
    - Replace R830, R828, R862.

- Check HDCP EEPROM(IC103) Power & I2C Signal
  - OK
  - No
    - Replace the defective IC.

- Check HDMI Signal.
  - OK
  - No
    - Check other set. If no problem, check signal line.

- Check Mstar LVDS Output.
  - OK
  - No
    - Replace Mstar(IC101) or Main Board.
9. All Source Audio

- Check the TV Speaker Menu. (Menu -> Sound -> TV Speaker)
  - On
  - Check AMP IC(IC501) Power 24V or 20V or 15V, 3.3V
    - No: Replace Amp IC(IC501)
    - Ok
  - Check Mstar AUDIO_MASTER_CLK R148.
    - No: Replace Mstar(IC101) or Main Board.
    - Ok
  - Check AMP I2C Line R140, R141.
    - No: Check signal line. Or replace Mstar(IC101).
    - Ok
  - Check Mstar I2S Output IC501 9,10,11 Pin.
    - No: Check signal line. Or replace Mstar(IC101).
    - Ok
  - Check Output Signal P501 1, 2, 3, 4 pin.
    - No: Replace Audio AMP IC(IC501).
    - Ok
  - Check Connector & P501.
    - No: Replace connector. if found to be damaged.
    - Ok
  - Check speaker resistance and connector damage.
    - No: Replace speaker.
10. Digital TV Audio

Check RF Cable & Signal.

ok

Check Tuner 3.3V Power L3703.

No → Replace L3703.

ok

Check Tuner 1.8V Power IC3703 2 pin : 1.8V.

No → Replace IC3703.

ok

Check IF P/N Signal TU3700 10/11 Pin.

No → Bad Tuner. Replace Tuner.

Follow procedure '9. All source audio' trouble shooting guide.

11. Analog TV Audio

Check RF Cable & Signal.

ok

Check Tuner 3.3V Power L3703.

No → Replace L3703.

ok

Check Tuner 1.8V Power IC3703 2 pin : 1.8V.

No → Replace IC3703.

ok

Check CVBS Signal TU3700 8 Pin.

No → Bad Tuner. Replace Tuner.

Follow procedure '9. All source audio' trouble shooting guide.
12. AV Audio

Check AV Cable for damage for damage or open conductor.

- ok

Check JK1604 & Signal Line.

- ok

Follow procedure '9. All source audio' trouble shooting guide.

- No

Replace Jack.

13. Component/SCART Audio

Check Component Cable for damage or open conductor.

- ok

Check JK1602, JK1603 & Signal Line.

- ok

Follow procedure '9. All source audio' trouble shooting guide.

- No

Replace Jack.

14. RGB Audio

Check Cable conductors for damage or open conductor.

- ok

Check JK1102 & Signal Line.

- ok

Follow procedure '9. All source audio' trouble shooting guide.
EXPLODED VIEW

IMPORTANT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These parts are identified by △ in the Schematic Diagram and EXPLODED VIEW. It is essential that these special safety parts should be replaced with the same components as recommended in this manual to prevent X-RADIATION, Shock, Fire, or other Hazards. Do not modify the original design without permission of manufacturer.
THE SYMBOL MARK OF THIS SCHEMATIC DIAGRAM INCORPORATES SPECIAL FEATURES IMPORTANT FOR PROTECTION FROM X-RADIATION, FIRE AND ELECTRICAL SHOCK HAZARDS, WHEN SERVICING IT IS ESSENTIAL THAT ONLY MANUFACTURED SPECIFIED PARTS BE USED FOR THE CRITICAL COMPONENTS IN THE SYMBOL MARK OF THE SCHEMATIC.
THE SYMBOL MARK OF THIS SCHEMATIC DIAGRAM INCORPORATES SPECIAL FEATURES IMPORTANT FOR PROTECTION FROM X-RADIATION, FIRE AND ELECTRICAL SHOCK HAZARDS. WHEN SERVICING IT IS ESSENTIAL THAT ONLY MANUFACTURE SPECIFIED PARTS BE USED FOR THE CRITICAL COMPONENTS IN THE SYMBOL MARK OF THE SCHEMATIC.
THE SYMBOL MARK OF THIS SCHEMATIC DIAGRAM INCORPORATES SPECIAL FEATURES IMPORTANT FOR PROTECTION FROM X-RADIATION, FIRE AND ELECTRICAL SHOCK HAZARDS, WHEN SERVICING IT IS ESSENTIAL THAT ONLY MANUFACTURERS SPECIFIED PARTS BE USED FOR THE CRITICAL COMPONENTS IN THE SYMBOL MARK OF THE SCHEMATIC.
THE SYMBOL MARK OF THIS SCHEMATIC DIAGRAM INCORPORATES SPECIAL FEATURES IMPORTANT FOR PROTECTION FROM X-RADIATION. FIRE AND ELECTRICAL SHOCK HAZARDS, WHEN SERVICING IT IS ESSENTIAL THAT ONLY MANUFACTURED SPECIFIED PARTS BE USED FOR THE CRITICAL COMPONENT IN THE SYMBOL MARK OF THE SCHEMATIC.
THE SYMBOLOG MARK OF THIS SCHEMATIC DIAGRAM INCORPORATES SPECIAL FEATURES IMPORTANT FOR PROTECTION FROM X-RADIATION, FIRE AND ELECTRICAL SHOCK HAZARDS. WHEN SERVICING IT IS ESSENTIAL THAT ONLY MANUFACTURED SPECIFIED PARTS BE USED FOR THE CRITICAL COMPONENTS IN THE SYMBOLOG MARK OF THE SCHEMATIC.
THE SYMBOL MARK OF THIS SCHEMATIC DIAGRAM INCORPORATES SPECIAL FEATURES IMPORTANT FOR PROTECTION FROM X-RADIATION. WHEN SERVICING IT IS ESSENTIAL THAT ONLY MANUFACTURED SPECIFIED PARTS BE USED FOR THE CRITICAL COMPONENTS IN THE SYMBOL MARK OF THE SCHEMATIC.
